Volume(L)	10	20	30
Ponds(L)	4000	8000	12000
	CF-10	CF-20	CF-30
In/Out(mm)	φ15/20/25	φ20/25/32/40	φ20/25/32/40
UV(w)	7	9	11
Dimension(mm)	335*289*404	416*342*519	416*342*599

**OPERATION:** The Bio-Pressure UVC Filter may be partially buried and must be placed outside of the pond. The unique pressure gauge shows green when the filter is performing correctly and shows red when filter cleaning is necessary. There is an external viewing port so that you can see if the UVC is working. The U.V. bulb is located within the filter and the bulb must be changed annually. We recommend changing the bulb at the beginning of April each year. To clean the filter it is designed to be back flushed by depressing the grey lever marked "CLEAN". Once clean water is being discharged press the lever marked "WORK".

**NOTE:** Ensure that a discharge pipe has been fitted to the cleaning outlet. Hose clips **MUST** be fitted to all of the hose-tails.

**IMPORTANT:** Prolonged exposure to UV light may damage your eye sight.

**ATTENTION:** From the 1<sup>st</sup> January 2005 installing this product in the garden is classed as 'notifiable' in the Building Regulations for England and Wales. The Regulations now require you to inform your local authority building control department that you intend to install this product prior to installation. They will advise you as to how you can get your installation approved.

**WARNING: SAFETY & ELECTRICAL CONNECTIONS.** These filters are designed to be permanently wired to the mains supply in a dry weatherproof enclosure through a Double-Pole Switched Fused Spur conforming to BS3676, fitted with a 3 or 5 Amp fuse. The installation must conform to the National and Local wiring regulations and a 10mA or 30mA residual Current Device (RCD) must be fitted to the mains supply. Consult a qualified electrician or local authority if in any doubt about wiring to the mains supply. Always unplug or disconnect ALL electrical appliances within the pond from the electricity supply before placing your hands in the water.

**WARNING: OPERATIONAL USE.** Do not use the electrical cord to lift the filter as this may cause damage. Do not allow the filter to freeze as this may invalidate the warranty.

**FILTER INSTALLATION.** These filters are suitable for garden ponds only and are not suitable for use in swimming pools. The larger the diameter of hose used the better the flow

of water, especially over long runs. When the hose diameter has been selected, cut the unwanted smaller steps from the hose tail, fit the hose and secure with a suitable hose clip.

**FILTER MAINTENANCE.** A quick daily check should be made to ensure that the pump and filter system are running satisfactorily. If the flow of water seems to be reduced check and clean the pump and filter. Use **ONLY** pond water or rain water when cleaning the sponges and filter media. Tap water, pre treated with a de-chlorinator may also be used.

**FILTER GUARANTEE.** If the filter, excluding the U.V. bulb, becomes unserviceable within one year from the date of purchase it will be repaired or replaced at our option free of charge, unless in our opinion the filter has been subject to damage, misuse or a repair has been attempted by an unauthorised person. Liability is not accepted for damage due to accident, improper installation or use. Liability is limited to the replacement of a faulty filter unit. This guarantee is not transferable and does not affect your statutory rights. If the filter fails please contact the retailer from whom it was purchased.
